

DOTLAKE IN PUBLIC ADMINISTRATION

Whitepaper

THE IMPORTANCE OF CYBERSECURITY IN PUBLIC ADMINISTRATION

Public administration plays an essential role in providing **services to citizens**, managing sensitive data and making critical decisions for the **well-being of society**. However, this crucial role also makes it an attractive target for cybercriminals and ever-evolving cyber threats.

But what challenges does the public administration face?

- **Emerging Threats:** the public sector faces constantly evolving cyber threats, from ransomware attacks to identity theft.
- **Sensitive Information:** handling sensitive data, such as citizen information and government operations, requires robust security measures.
- **Risk Assessment:** Effective vendor risk assessment is essential to ensure the integrity and security of government systems.

And in order to help the public administration, **Dotlake CTI** is born, a solution that is responsible for collecting information in an automated way from the **deep web, darknets, ransomsites, telegram and the most important cybercriminal forums** in the market so that you can consume it quickly and safely and thus be able to monitor and prevent such attacks even before they can pose a real threat.

What does Dotlake CTI offer you?

- **Citizen Protection:** Dotlake directly contributes to the protection of citizens by safeguarding their personal information and maintaining trust in government institutions.
- **Proactive Prevention:** The ability to anticipate and prevent threats before they materialize provides a crucial advantage in cyber defense.
- **Regulatory Compliance:** Dotlake helps the public sector comply with cybersecurity regulations, ensuring high standards of data protection.

And not only that...

- **Research portal** to assess the level of risk by increasing your ability to analyze the severity of threats, their scope and potential impact through constant monitoring.
- **Password leak detection** mitigates the risk of unauthorized access.
- **Proactive prevention** and risk assessment of suppliers strengthening defenses against external threats.
